01 · ABOUT

ChartsWatcher, made native.

SCOTTGO Trading Suite runs ChartsWatcher in its own desktop app with a bundled theme engine, a multi-monitor window launcher, app launchers, and the GO-Ai research assistant with a full trading journal. Log in with your ChartsWatcher account; add an AI key + CW API to power GO-Ai.

REQUIREMENTS

Windows 10 / 11 (64-bit) · a ChartsWatcher account · internet connection

02 · INSTALL

Four steps.

1 Download + unzip

From the link in your email.
It's a .zip — right-click it,
choose 'Extract All', then open
the .exe inside.

2 Run the installer

Double-click the .exe.
If Windows SmartScreen warns it's an
unrecognised app, click 'More info'
then 'Run anyway'. Safe for alpha.

3 Follow the wizard

Keep the default install location,
or pick your own. No admin
password required.

4 Launch + activate

Open it from the Start Menu.
Agree to the terms, then activate
your licence (next page), then sign
in with your ChartsWatcher account.

HEADS UP

Not code-signed for alpha, so Windows shows a blue 'Windows protected your PC' box — this is normal. Click 'More info' → 'Run anyway'. No button? Right-click the .exe → Properties → tick Unblock → Apply, then run it. If Defender deletes it: Windows Security → Virus & threat protection → Protection history → Allow.

03 · FIRST LAUNCH

The Welcome screen — set up once

Twelve steps in three phases: Get connected, Make it yours, Finish. Every card explains itself and can be skipped. The key ones:

1 Your screens

Your monitors drawn as they
sit. Identify flashes numbers.

2 Connect CW API

CW User ID + API key feed
GO-Ai news, scans, alerts.

3 GO-Ai Co-Pilot

Your AI key, plus the ready-
made CW layout import.

4 Modules & Widgets

Tick what opens with the
app. The rest stays a click away.

5 Pick a theme

SCOTTGO, broker styles or
CW Classic. Change anytime.

6 Where it all opens

Put every window on any
monitor before the app opens.

TIP

Turn on 'Remember CW login' (Settings → General) to skip typing your password each launch. It's encrypted on this PC only.

ACTIVATION · GETTING STARTED

Your licence & key

SCOTTGO Trading Suite is activated with a licence key the first time you run it. After you agree to the terms, the 'Activate your licence' screen appears. Here's how to get your key, and what to do when you move to a new PC.

1 Get your key

On the Activate screen, type your email and click 'Email my key'. It arrives in your inbox in a minute.

2 Activate

Paste the key (it looks like CWD-XXXX-XXXX-XXXX) into the box and click Activate. The app then opens.

3 Change PC?

Settings -> About -> Licence -> 'Deactivate this device' frees the key. Activate on the new PC the same way.

GOOD TO KNOW

Licence Agreement (EULA) — on first run you accept the Licence Agreement before the app opens. The full text is always under Settings -> About, with the Terms, Privacy Policy and Disclaimer.

Two devices — one key activates on up to two of your own computers (e.g. desktop + laptop), so you don't need to deactivate just to use a second PC.

Works offline — after activating, SCOTTGO Trading Suite runs offline for up to 14 days between licence checks. Settings -> About shows the days left, and the app warns you before they run out.

Find your key again — Settings -> About -> Licence shows it (Show / Copy). It's hidden by default so it isn't caught in screenshots.

Lost your key — use 'Email my key' again with the same email; it resends the same key.

04 · MACOS (EXPERIMENTAL)

On a Mac? Start here.

There's an experimental Mac build. It isn't signed by Apple yet, so the first time you open it macOS will try to block it. Nothing is wrong with the app. Clear the block once (Step 3) and it opens normally every time after that.

REQUIREMENTS

macOS (Apple Silicon or Intel) · a ChartsWatcher account · internet connection

INSTALL · FOUR STEPS

1 Pick the right file

Apple menu > About This Mac.
'Apple M1 / M2 / M3...' means use the arm64 file. 'Intel' means use the x64 file.

2 Install

Open the .dmg, then drag SCOTTGO Trading Suite into the Applications folder.

3 First open (clear the block)

If you see 'app is damaged', that is the unsigned-app block. Clear it with one Terminal command. See HEADS UP below.

4 Log in

Open the app and sign in with your ChartsWatcher account when the page loads.

HEADS UP

Damaged message? Keep the app in Applications. Open Terminal (Cmd+Space, type Terminal). Type: `xattr -dr com.apple.quarantine` followed by a single space, then DRAG the app into the Terminal window to fill in its path, and press Enter. Now open the app normally. You only do this once. It just removes the 'downloaded from the internet' tag and does not change the app.

GOOD TO KNOW ON MAC

- Copy / paste uses Cmd+C / Cmd+V on a Mac, not Ctrl. The Edit menu at the top has them too.
- Auto-update does not run on Mac yet, so new builds are sent to you manually.
- This build is new and not yet tested on a Mac, so please tell us about anything that looks off (title bar, theme, windows). Screenshots help a lot.

05 · WHAT YOU GET

Everything SCOTTGO Trading Suite adds

Theme engine

Recolour ChartsWatcher to match your setup. SCOTTGO + broker palettes, editable themes, an in-app colour picker and screen eyedropper.

Browser Launcher

Open CW pages on set monitors and positions. Up to 20 screens, each remembering its URL, screen and size. Open all with Ctrl+Shift+6.

Application Launcher

Launch up to 20 of your own apps from CW Desktop. We only launch them — window position is set in the app, not here.

Auto-updates & login

Built-in update check from the menu. Optional encrypted login autofill so you don't retype your CW password.

GO-Ai assistant

A research orb + Centre that reads the open ticker: live data, halts, filings, dilution and an alerts feed; answers with your own AI key.

Trading journal

Log trades; P&L, R and R:R compute for you. P&L calendar, reports, a Notebook day page, and broker imports (21 presets, CSV or Excel).

GO-Fundamentals

Equity structure in its own window: short data, dilution & warrants, ownership, financials and filings, on free SEC data.

GO-Markets & widgets

Market heatmaps + a live market overview, a glanceable Stock Quote view, and a Market Clock for the US session.

GOOD TO KNOW

- Everything is in Settings (gear / menu): General, Appearance, Windows, GO Modules, Widgets, Connections and About. Settings → Windows → Built-in Modules places the GO windows.
- Pop out any tab: tabs in the GO-Ai Centre, GO-Fundamentals and the Stock Quote can each move into their own window (the arrow on the tab) and dock back when you're done.
- Looks too big or small? Settings → Help covers Windows display scale and app zoom (Ctrl + / -).
- Full docs (journal, GO-Ai and more) are in the in-app Help Centre (menu → Help Centre).

06 · SUPPORT

Need help?

Stuck on the installer, can't log in, or hit a bug? Email us — alpha testers get direct support. For ChartsWatcher data, scanners or your CW account, contact ChartsWatcher directly.
